

Roving Vehicle

This is yet another first of its kind offering by Syntell. We have combined ANPR technology with a roving vehicle as a unique tool to be used for both traffic and crime prevention tool.

Syntell, with the backing of SAPS and Business Against Crime have launched this latest technology. The Number Plate Recognition System Technology has been combined with our JIS online database system provide a fully on line information system.

The ANPR cameras installed to a vehicle captures number plates in all planes and compares the information read to the JIS system data, such data can include, outstanding fine data, warrants, as well as the Unicode database where all the SAPS stolen vehicles and other vehicles of interest have been logged.

The system will automatically detect these vehicles and will alert the operator as well as communicating such information wirelessly to interested parties who have been authorised to receive such information.

This system has been deployed with resounding success in the JHB Metro, KZN and the Western Cape. Success to date include numerous recoveries of:

- stolen
- unlicensed and unroadworthy vehicles
- Outstanding warrants of arrests

The system also captures images of all the vehicles and this can be used for evidential purposes as well.

Detailed reports are provided, witch include reports that can be automatically sent wirelessly to management and monitoring controls.

What in the past took many hours of police work can now be achieved by one operator in a matter of seconds.

EXAMPLE OF TYPICAL SYSTEM

- Roaming ANPR Solution
- Access to multiple online Databases
- Optional side cameras for parking area roaming
- Easy to operate User Interface
- Access to national databases eNatis
- Optional Warrants Serving

MIDRAND
